Implementation of file upload and email with attachment.

Implementation of any one innovative feature aimed at improving User Experience (UX)

My implementation for an innovative feature to improve user experience is the ability for administrators (or eventually staff), to CRUD roles. I envision this as a way for users to more specifically narrow down their experience in the UI. Eg. Roles can be created for certain age groups, or certain conditions. So that the website can dynamically allow access to different regions. If someone has the role for reoccurring MRI for a specific reason, they can be assigned that role, and have the webpage accessible to them for certain help. Or certain doctors available for them to book.

As it currently is the role authorization blocks anyone who is not an admin. This is a proof of concept.

List of Roles

[Create](#)

Id	Name	Delete	
19fcaa63-e506-4896-9f2f-3398f04ae807	Users	Edit	Delete
6315e35d-4e26-4638-ad0a-ab0844d01878	Staff	Edit	Delete
c3b7167a-48d4-43ac-824d-7e2ba6e28409	Admin	Edit	Delete

As it stand only 3 roles have been created.
